I am an experienced web and UI/UX developer with a strong background in both backend and frontend technologies. I am skilled in using MongoDB, PostgreSQL, Node.js, and MVC frameworks for backend work. For frontend development, I use JavaScript, HTML5, SCSS, CSS, React, Angular, Bootstrap, Material Design, and jQuery. I focus on making applications that are easy to use and look good, ensuring they meet the needs of users and help achieve business goals.

## Top skills

## Summary

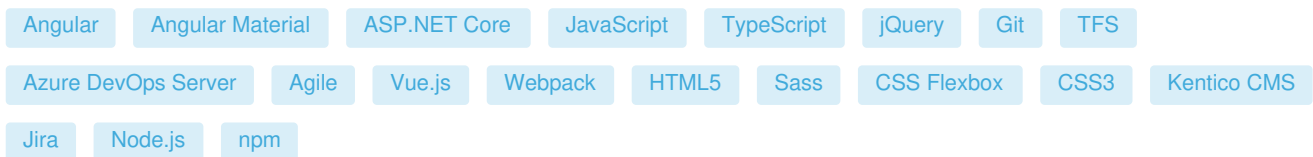

### Ideal next job

I am eager to work in an agile environment that boasts a great culture and a friendly team. I'm looking to enhance my front-end development skills, particularly in creating responsive and dynamic user interfaces using React, Angular & Blazor. While I have extensive experience working with REST APIs to fetch and display data in Angular applications, Shopify, and WordPress, I am keen to deepen my expertise in modern front-end frameworks and technologies.

When it comes to the company, the main priority is finding a space where I can grow. Specifically, I am looking to advance into a leadership role at some point in my career, so I would appreciate a company that supports this growth trajectory. I am open to all industries.

## Work experience

Jun 2017 - Present  
**Osiris Trading (Web Developer)**

OSIRIS is a turnkey solutions provider that powers Betway operations worldwide. In my role, I focus on building and maintaining sports betting web applications primarily using Angular2 and newer versions. I have participated in several projects, including the prominent 4toscore promotion.

4toscore is a major marketing initiative where participants predict the first four goal scorers in four selected games each week. This promotion is developed using angular, with data sourced from a REST API.

One of the most engaging projects I've worked on was a penalty shootout game, built using HTML5, Canvas, and Phaser. This game was a key feature of our Big Brother Niger Predictor promotion, where players predicted which housemates would be eliminated.

### Responsibilities:

- Actively contribute and participate in the agile development of project timelines, system flow diagrams, and documentation.
- Staying up to date with new technology and helping junior developers on how to incorporate the latest trends.
- Coordinate with architects and business analysts to determine the functionalities of projects.
- Develop technical solutions to complex business problems.
- Generating ideas with team members and offering insightful solutions.
- Utilize standards, architectures, and processes to ensure that all code and development practices conform to industry best practice.
- Attending meetings and briefings with clients.
- Taking responsibility for all Betway promotions development and ownership of thorough quality control.
- Consume REST APIs to develop websites/applications utilizing Angular2+, HTML5, VueJS, Javascript and Sass.

- Setting up source control (git repositories).
- Setting up CI/CD to automate deployment.
- Code reviewing for accuracy, quality, and functionality then approving pull requests.
- Provide support for applications outside of working hours. (On Standby)

### Fogg Agency (Frontend engineer)

Angular

Angular Material

GitLab

JavaScript

Git

gulp

WordPress

Adobe Photoshop

Bootstrap

MongoDB

HTML5

jQuery

Jira

FOGG was a dynamic agency that specialized in web and mobile development solutions. My role involved converting PSD files into functional web applications. I worked on several projects, including Interactive Worksheets.

Interactive Worksheets is an application used in schools to teach students about saving electricity. The application was built using AngularJS, with data stored in local storage.

### Responsibilities:

- Develop applications that deliver value to the business.
- Developing PSD files into functional web applications.
- Developing new and maintaining existing WordPress sites.
- Develop and maintain angular web applications.
- Ensuring high performance and availability of applications across all devices.

### Softeqa (Junior Frontend Developer)

AngularJS

HTML5

WordPress

jQuery

JavaScript

Git

Sass

Bootstrap

Vue.js

Adobe Photoshop

ASP.NET Razor

ASP.NET MVC

Softeqa is a full-service digital agency renowned for its innovative approach. My responsibilities included transforming PSD files into functional email newsletters and websites. I managed all campaigns for Highlife Shop, SAA Duty-Free, and KQ Duty-Free.

### Responsibilities

- Developing mailers and web applications from PSD files.
- Developing new and maintaining existing WordPress sites.
- Develop and maintain angular web applications.
- Utilize standards, architectures, and processes to ensure that all code and development practices conform to industry best practices.
- Ensuring high performance and availability of applications across all devices.
